

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A segregated container for holding multiple substances, comprising:

an outer container, said outer container having a circular rim;

an inner container, said inner container being at least partially slidably received within said outer container, said inner container having an elongated shape with an upper rim, a cylindrical sidewall, and a closed bottom end, said upper rim being coextensive with said cylindrical sidewall;

a sealing member, wherein said sealing member is a membrane that is releasably secured to the inner container upper rim so as to cooperate with said inner container to define a closed space within said inner container; and,

a sealing cap, said sealing cap being sealingly secured to said outer container circular rim so as to secure said inner container within said outer container.

2-6 (Cancelled)

7. (Original) The segregated container according to claim 1, wherein said

sealing member extends over said outer container circular rim.

Claims 8-10 (cancelled)

11. (Currently Amended) The segregated container according to ~~claim 5~~ claim 1, wherein said inner container may be entirely slidably received within said outer container, and wherein said sealing member is received on said outer container circular rim and helps to support said inner container on said outer container.

12. (Cancelled)

13. (Currently Amended) ~~The segregated container according to claim 12, A~~
segregated container for holding multiple substances, comprising:

an outer container, said outer container having a circular rim;

an inner container, said inner container being at least partially slidably received within said outer container, said inner container having an elongated shape with an upper rim, a cylindrical sidewall, and a closed bottom end, said upper rim being extending radially from an upper end of said cylindrical sidewall;

a sealing member releasably secured to the inner container upper rim so as to cooperate with said inner container to define a closed space within said inner container;

a sealing cap, said sealing cap being sealingly secured to said outer container circular rim so as to secure said inner container within said outer container;

wherein said inner container upper rim rests on said outer container circular rim;

and,

wherein said outer container circular rim includes an annular recess and wherein said inner container upper rim is received within said annular recess.

14. (Original) The segregated container according to claim 13, wherein an upper surface of said inner container upper rim is generally flush with an upper surface of said outer container circular rim.

15-18 (Cancelled)
